Student Emergency Plan
UND Center for Family Medicine

Kim Krohn, MD, MPH, FAAFP is the UND CFM Medical Director and educational Program Director. Cindy Carlson, RN, is the Nursing Supervisor and coordinator of ancillary professional students.

Students rotating at the UND Center for Family Medicine will be assigned at each clinic session to a physician who will be responsible for discussion of goals for the clinic session, supervision and provision of learning opportunities in the family medicine clinic. The clinic is a residency clinic. Some of the physicians are resident physicians, some are faculty physicians. The physician will work with the student regarding goals prior to the session, review goals met and lessons learned at the end, and will complete the academic paperwork required.

Safety is a priority in the clinic. Safety of the student as far as professional risk is assured via direct supervision by the supervising physician, assuring continuous assessment of skill attainment and knowledge. All patient contact is completed under the professional licensure of the supervising physician.

Physical safety of the student is assured through standard clinic safety measures. Fire extinguishers and safety exits are marked in the clinic for easy localization for use in the case of emergency. Chemicals in the clinic are marked and safety procedures are in place for accidental exposures. The supervision assures that exposures are identified and properly treated with proper follow up. Equipment use is fully supervised by the supervising physician to minimize any risk of injury from clinic equipment.

An AED is available in the clinic and a large number of phones are available to notify EMS. A student’s role in clinic emergencies should be to notify the supervising physician if the student is the individual identifying the emergency and to follow any instructions given by the supervisor.

Proposed June, 2016
